

SPRAY

LIQUID FOLIAR FERTILIZER

Soil Wetter RM129

Use on lawns, Gardens, Vegetable and Flower Beds, Pot Plants, Indoor Plants, Hanging Baskets and Broadacre.

- LONG TERM SOIL WETTING AGENT •
- THE WATER SAVER • SAFE AND EFFECTIVE •

20 Litre

Benefits: Gives deep and even wetting-minimizes run-off. Promotes deep root growth, eliminates dry patches. Reduces watering requirements. Effective 12 months after application.
Non-toxic to plant roots.

Usage Guidelines: 5mls of Soil Wetter RM129 per sq metre (1litre treats 200sq/m). Designed for turf grass, home lawns, golf courses, bowling greens, tennis courts, hanging baskets, pot plants, trees and shrubs, potting mixes.

Directions: Prepare a solution of 20mls of RM129 with 10 litres water in a watering can. For lawns treat an area of 4 sq metres, apply in cool of day and water thoroughly. For hanging baskets, pot plants, soil mix, trees and shrubs, drench with the prepared solution. Pots and baskets may also be soaked in the prepared solution.

Broadacre Application: Apply 2 litre Soil Wetter RM129 with 50 litres water per hectare. Suitable fertilizers may be applied at the same time but immediately water in.

CONDITIONS OF SALE: 1) Seller warrants that this product consists of the ingredients specified and is reasonably fit for the purpose stated on this label when used in accordance with directions under normal conditions of use. No one, other than the officer of the Seller, is authorised to make any warranty, guarantee or direction concerning this product. 2) Because the time, place, rate of application and other conditions of use are beyond Seller's control, Seller's liability from handling, storage and use of this product is limited to replacement of product or refund of purchase price.

This product is a true residual soil wetting agent and not a detergent which readily flushes through the soil when watered.

- 100% W/V concentrated surfactant
- Long-term soil wetting agent • Safe and effective
- "The water saver" • Combats non-wetting soils
- Increases germination rates • P.H. 6-7
- Enables soil to hold up to 50% more water
- Enhances deep root growth
